

# Contact Cement Thinner/Cleaner

- Restores thickened contact cement to its proper consistency
- Cleans up wet SOLVENT-BASED and all dried contact cements

**For THINNING:** Add slowly in small amounts and stir until contact cement regains its original consistency. Over dilution will cause adhesion problems.

**For CLEANING:** Dampen a cloth rag with THINNER/CLEANER and wipe excess contact cement away. Soak brushes to soften and then wipe on rags. May damage synthetic brushes.

**Precautions:** Protect the work area. This product will damage painted, lacquered, varnished surfaces, asphalt, linoleum, vinyl, and many types of plastics.
